

HW3 Report

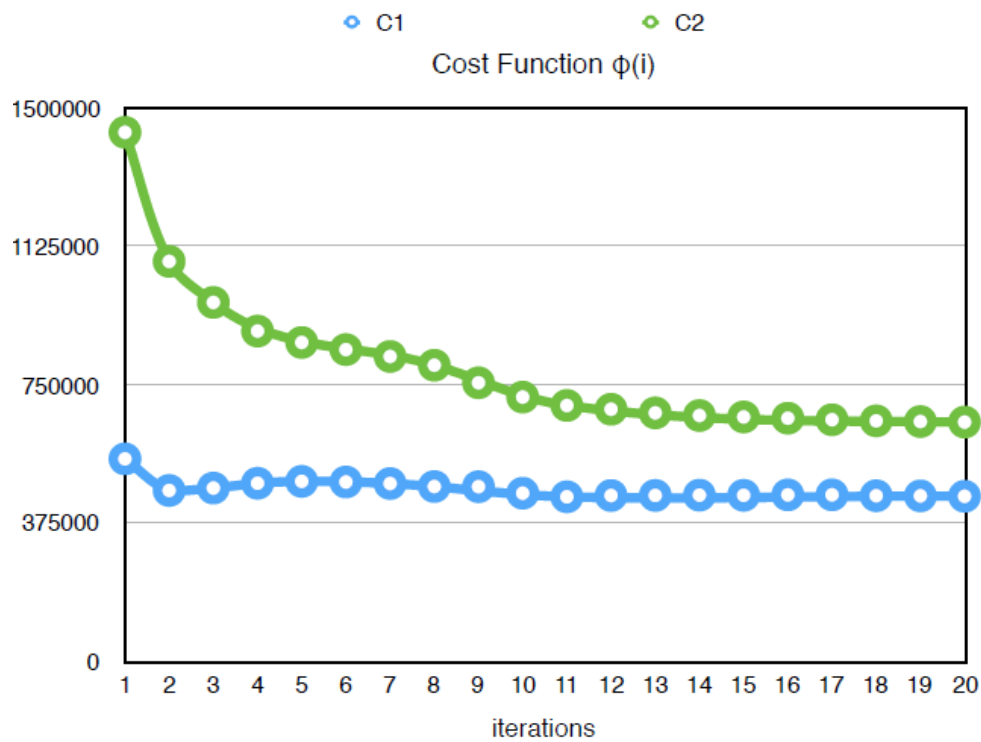

105062581 蕭文逸

1. Cost 和 Iteration

Euclidean:

Manhattan:

2. After 10 iterations:

Percentage = (10 / 1)

<i>Euclidean</i>	C1	C2
<i>Iteration 1</i>	623660345.3064132	438747790.02791923
<i>Iteration 10</i>	459021103.34229076	108547377.17857023
<i>Percentage</i>	73.601%	24.740%

Discussion:

比起隨機選擇 10 個點(C1)，C2 表現比較好，因為起始的每個點去距離較遠，所以比較少機率會有 cluster 太過集中的情形，收斂和 improvement 也比較大。

<i>Manhattan</i>	C1	C2
<i>Iteration 1</i>	550117.1420000008	1433739.3099999963
<i>Iteration 10</i>	448929.4744988635	649689.0131843538
<i>Percentage</i>	81.606/5	45.314%

Discussion:

雖然 C2 收斂的比例較好，但是這次換 C1 表現較為出色。這有可能是因為 C1 選點就已經很優秀逼近正解(所以幾乎沒有改進)，也有可能是 cost function 造成的原因，可能 Manhattan 在處理高維度資料時更為出色。

3. Distance between Clusters (20 次 iteration)
